# Machine Surpasses Human-level Image Classification

**IMAGENET Large Scale Visual Recognition Challenge**

The Image Classification Challenge:  
1,000 object classes  
1,431,167 images

**Output:**  
Scale  
T-shirt  
Steel drum  
Drumstick  
Mud turtle

✓

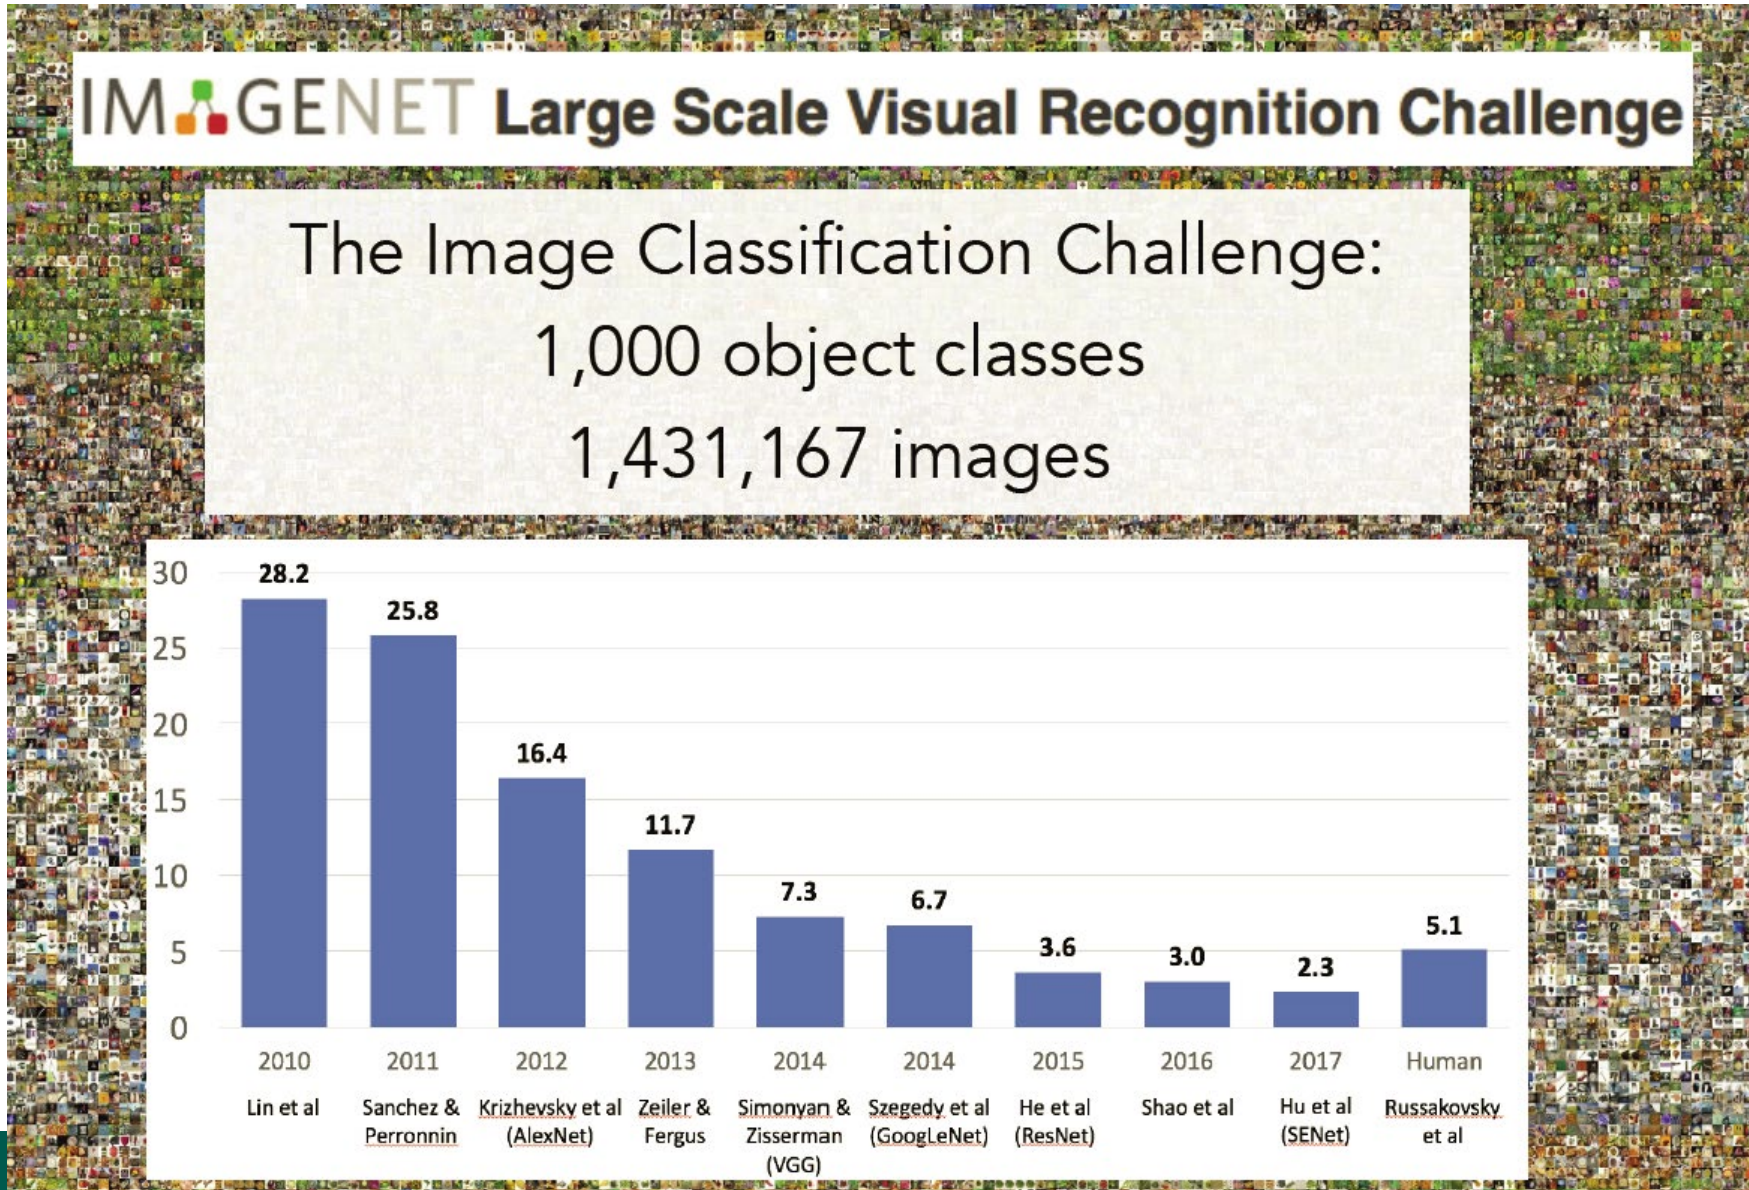

**Output:**  
Scale  
T-shirt  
Giant panda  
Drumstick  
Mud turtle

✗

# Machine surpasses Human-level Image Classification

# Closing Down the Gap of Machine Translation

## ■ Google Neural Machine Translation

- Recently, Google announced the launch of a new model for Google Translate with deep learning architecture - Recurrent Neural Network (RNN).

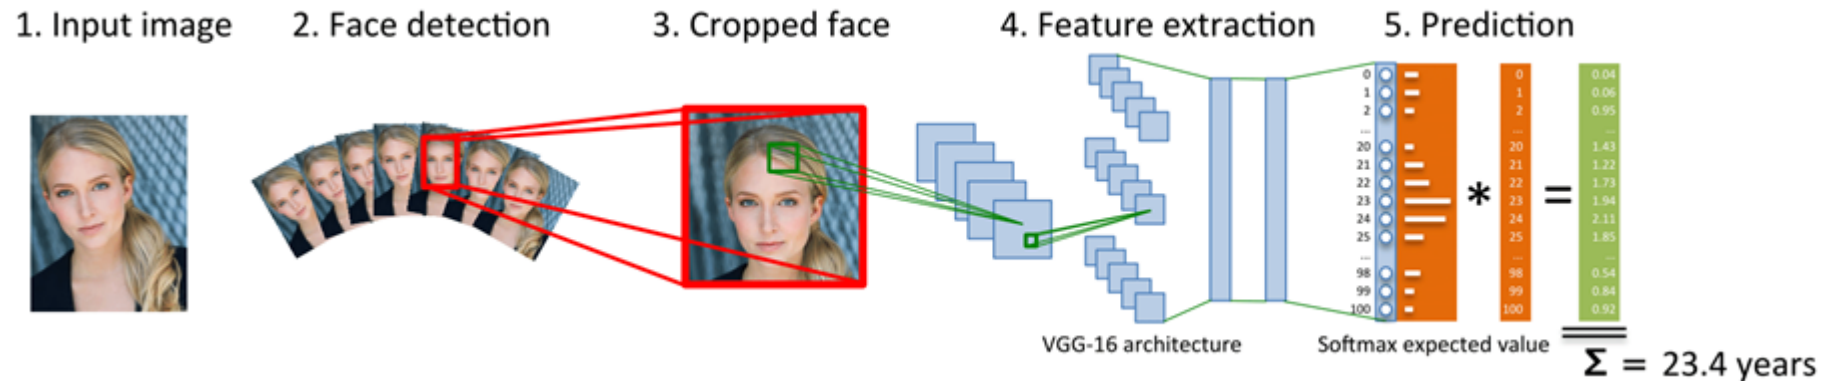

- The key outcome: closing down the gap with humans in accuracy of the translation by 55–85%. It is difficult to reproduce good results with this model without the huge dataset that Google has.

# Ford URP: Ranking-CNN for Driver Age Estimation – CVPR 17, 18

- Pose, Illumination, Occlusion, Motion, etc.
- Deep and Transfer Learning Model trained with 500k+ Face images from IMDB, Wikipedia, and MORPH II with age and gender labels

IMDb

460,723 images

Wikipedia

62,328 images

# Ford URP: Ranking-CNN for Driver Age Estimation

day/night capability,  
delivering vibrant color images  
during the day and high resolution  
b/w images at night.  
More robust to illumination changes

Onboard video processing  
Nvidia GPU-based Architecture  
Input/output Design

# Presurgical Evaluation for Epilepsy: Brain Fiber Classification

- Many kids take epilepsy surgery every year: evaluate the risk of damaging functionally important white matter fibers
- Innovation: Diffusion Tensor Imaging(DTI)+Deep Learning to replace current gold standard: Electrical Stimulation Mapping which involves opening skull and placing sensors.

ESM, Roland et al., Front. Hum. Neurosci.  
2013

# Brain Fiber Tracking and Classification

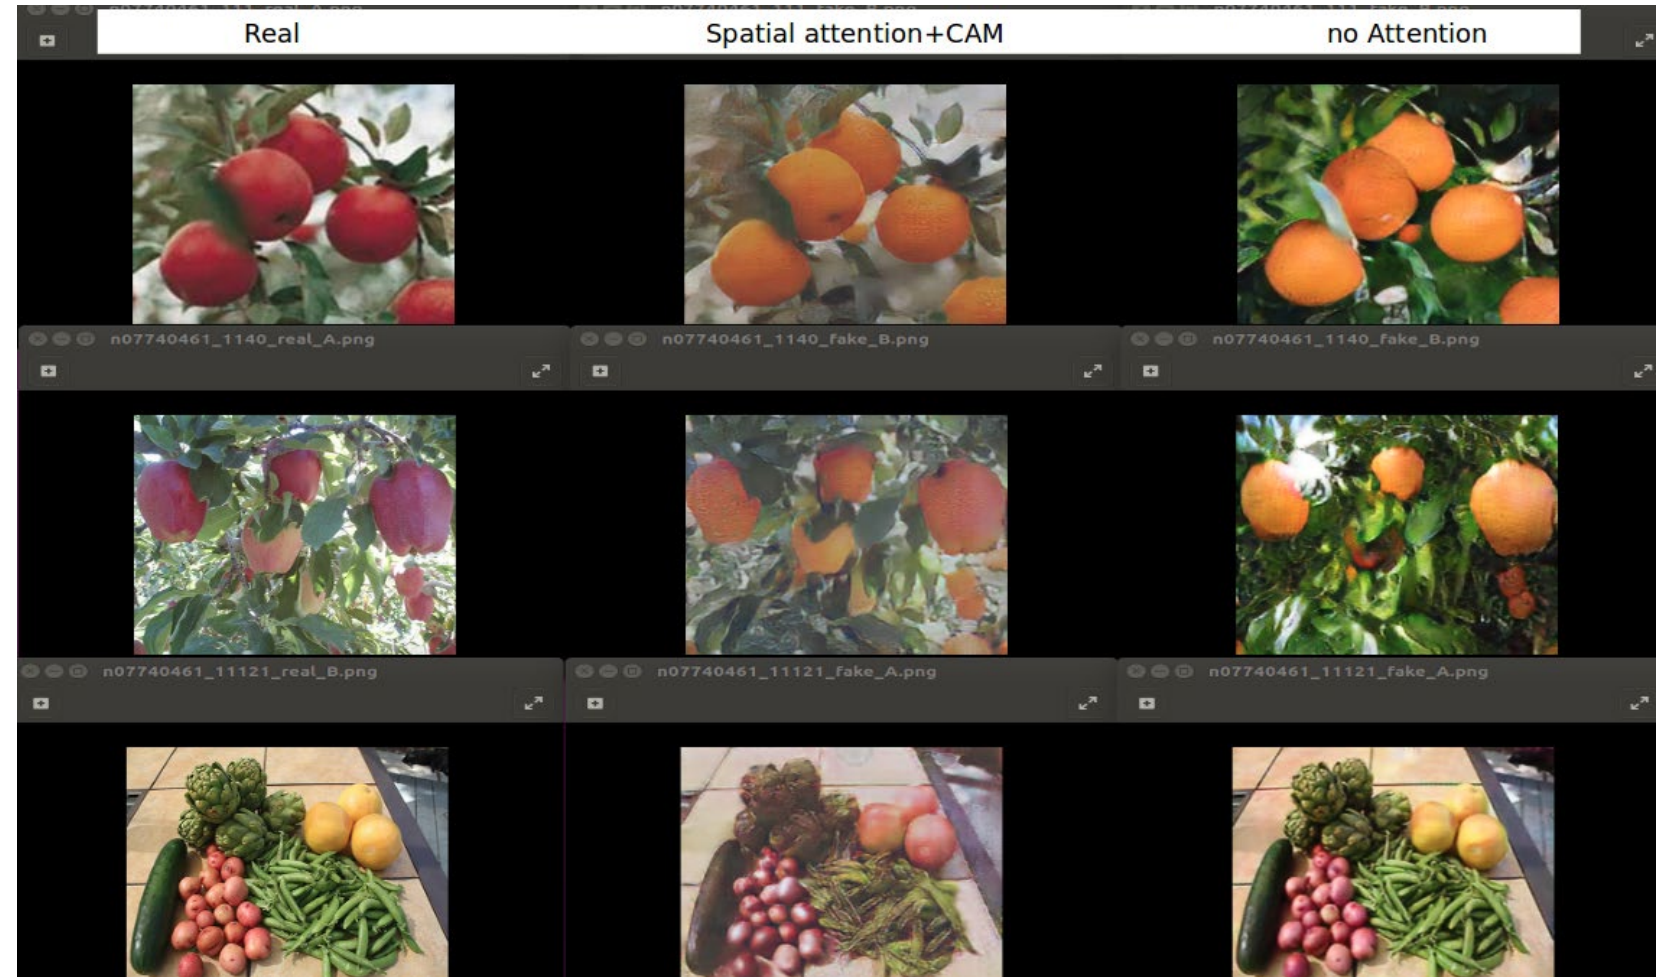

- With Prof. Jeong in the Department of Pediatrics on an NIH project
- 65 categories of fibers collected by DTI, 5.5M in total
- Deep Learning Model for Heavily Unbalanced Data

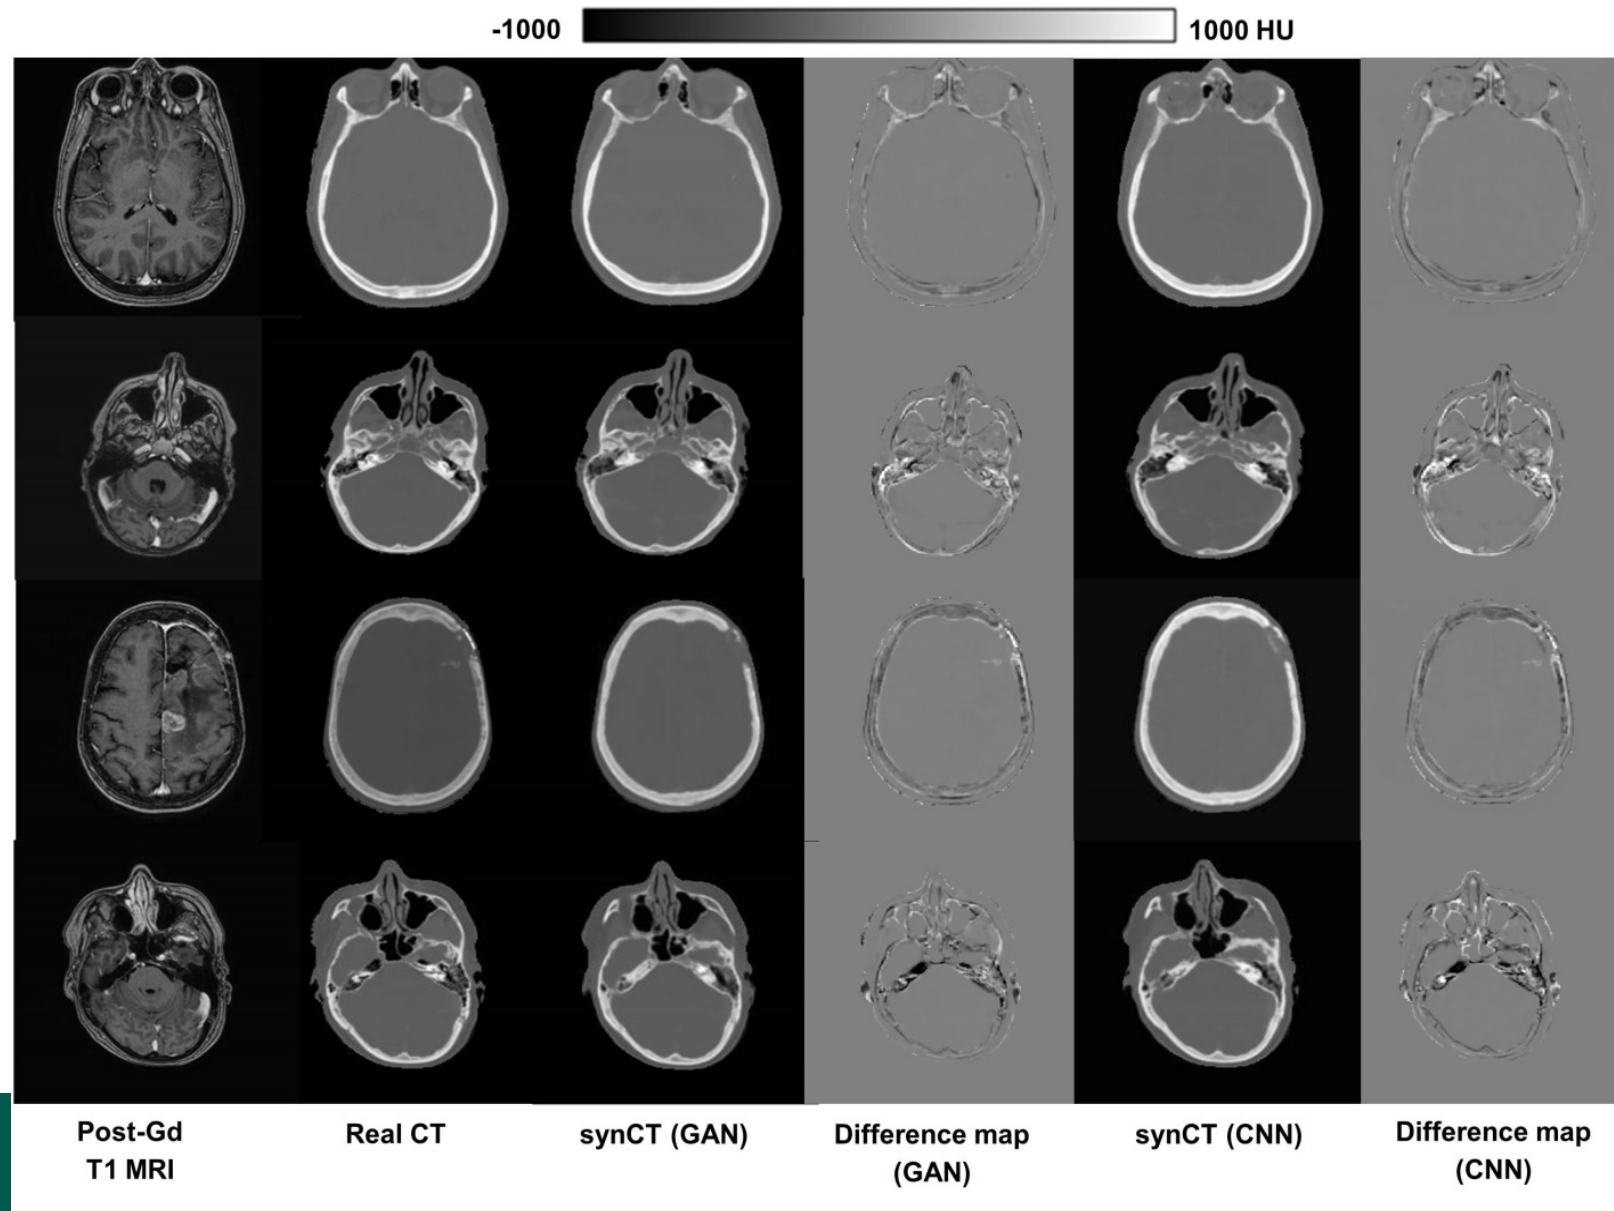

Function	Fiber Class Index	From	To
somatosensory	$C_{1,34}$	arm area	PLIC
	$C_{4,37}$	face area	PLIC
	$C_{5,38}$	finger area	PLIC
	$C_{16,49}$	leg area	PLIC

**Table 1:** Fragment of the annotated transcript of a dialogue between a counselor and an adolescent. MYSCOPE codes assigned to the utterances and their meaning are shown in the first two columns.

Code	Behavior	Speaker	Utterance
SS	Structure Session	Counselor	Okay. Can I meet with Xxxx alone for a few minutes?
OQO	Open-ended question, other	Counselor	So, Xxxx, how you doing?
HUPO	High uptake, other	Adolescent	Fine
OQTBN	Open-ended question, target behavior neutral	Counselor	That's good. So, tell me how do you feel about your weight?
CHT+	Change talk positive	Adolescent	It's not the best.
CQECHT+	Closed question, elicit change talk positive	Counselor	It's not the best?
CHT+	Change talk positive	Adolescent	Yeah
CQTBN	Closed question, target behavior neutral	Counselor	Okay, so have you tried to lose weight before?
HUPW	High uptake, weight	Adolescent	Yes
